

## Cameron-Cole provides the guidance and tools to succeed in a low-carbon economy.

For over a decade, Cameron-Cole has provided leading-edge sustainability services to private and public organizations both in and outside the U.S. Well ahead of the curve, Cameron-Cole helped to shape best practice in this field and we are recognized as a listed contributor to the WRI/WBCSD GHG Protocol.<sup>®</sup> The firm provides GHG verification services for:

- California Air Resources Board Mandatory Reporters and the Offset Project Program
- MassDEP
- The Climate Registry
- The Carbon Disclosure Project

When organizations are ready to move beyond reporting, Cameron-Cole assists with development of Climate Action Plans and Energy Efficiency & Conservation Strategies. Our sustainability communications and marketing capabilities combined with our technical analysis allow our clients to effectively communicate the distinguishing benefits of improvements, both planned and achieved.

*Cameron-Cole has the distinction of being the only company in the nation that is a Carbon Disclosure Project Consultancy Partner and also accredited by the American National Standards Institute as a GHG emissions verification body.*

# Carbon Management Services

Numerous organizations are required to report their emissions to meet mandatory state and federal reporting requirements. Alternatively, many unregulated organizations voluntarily report their emissions through programs such as The Climate Registry and the Carbon Disclosure Project. Cameron-Cole provides design and development of GHG inventories for clients in a wide variety of sectors using leading voluntary protocols and mandatory reporting guidelines. Our services include:

- Inventory design based on one or multiple protocols
- Implementation and data collection support
- Emissions calculations and analysis
- Reporting for state, federal, voluntary programs
- Inventory management plan development

Cameron-Cole is unique among climate change consultants in that our services go beyond inventory development and reporting assistance. Other compatible services include the following.

**Building/Facility Retrofit Analysis** — This holistic planning and implementation service includes a baseline analysis of the building's current performance, a benchmark comparison, and an option list of building/facility improvements to achieve the greatest potential cost savings and reduction of natural resources. It permits decision-makers to demonstrate a sound basis for allocation capital to fund improvements and to maximize ROI.

**Sustainability Program** — Program services include policy, vision and strategy development, stakeholder mapping, benchmarking, environmentally preferable purchasing, life cycle analysis and sustainable supply chain management.

**Water Services** — Our service offerings cover the array of water management issues confronting property owners today. These services include stormwater, wastewater management, water footprints, and water reduction/efficiency strategies, for both interior and exterior usage.

Cameron-Cole's staff includes experts in verification, energy use, water use, policy analysis, sustainability data management, and building design and LEED.<sup>®</sup> For more information on our services, please contact:
